## CREAM-BASED FOOD COMPOSITION AND PROCESS OF MANUFACTURE

## **ABSTRACT**

- A process for the preparation of a cream, in which a mixture containing about 10% to 20% of milk derivatives, about 8% to 30% of sugars, about 10% to 60% of fermented dairy product, about 0% to 25% of sour cream or of dairy cream containing about 25% to 45% of fatty substance, about 0% to 35% of texturizing agent, about 0% to 20% of aromatic product,
- 10 and about 0% to 0.5% of salt is prepared by stirring, heat treating at a temperature of about 60°C to 115°C for about 7 seconds to 5 minutes; the temperature of the mixture is then adjusted to about 15°C to 40°C and to which molten fatty substance is added with stirring, so as to obtain a
- 15 homogeneous cream. The cream thus obtained can be used in the manufacture of a food composition by depositing it on at least one layer, preferably between two layers, of food product, e.g., a biscuit.
